INTERESTS

Hardware-aware efficient models; machine learning system; data efficiency algorithm.

My research focuses on building models, algorithms, and systems for scalable and efficient ML. The goal is to bridge the gap between the rapid scaling of models and the slower scaling of hardware and high-quality data. In particular, my work has been along two lines: 1) Designing and training hardware-aware and system-aware models for fast model inference. 2) Designing algorithms for efficient data selection, augmentation, and human feedback.
